Work schedule: full day, flexible schedule

Desired travel time to work: any

Work experience — 5 years 1 month

September 2017 —
till now
2 months

Own projects

Web developer

My website ilya.online (portfolio and resume) with my own frontend and backend from WordPress.

I also plan to do several other web projects, including with my own backend (to practice Express and Laravel).

April 2014 — till now
3 years 7 months

Stolichnoe Televidenie

Minsk, www.ctv.by/

Content manager, translator

- I translate and edit current news and analytics for the STV website (politics, economy, society, culture, sports) and publish using CMS Drupal;
- Analyze english website traffic;
- I have built a system of work with beginner translators who undergo internships at STV Channel. I have developed a mini-guidebook for trainees reflecting the style and grammar that we at STV should follow when translating from Russian into English;
- I edit and read translations of news reports done by other translators (I worked with a total of 40 translators). My work with the trainees was positively assessed by the Minsk City Linguistic University (written confirmation is available);
- Replaced chief in dealing with the legal documentation of the directorate.

February 2013 —
April 2014
1 year 3 months

Belarusian Telegraph Agency (BelTA News Agency)

Minsk, eng.belta.by

Translator

- Translated news on the President of the Republic of Belarus into the English language as well as other political, economic, and sports news of the news agency BelTA
- Translated foreign correspondence for the agency

- Participated in telephone conversations with foreign agency clients
- Helped design the layout of the new BelTA website

May 2012 — August
2012
4 months

Belarusian Telegraph Agency (BelTA News Agency)

Minsk, eng.belta.by

Translator

- Translated political, economic, and sports news of the news agency BelTA
- Translated foreign correspondence for the agency

Swedish — I can attend an interview

Skills

JavaScript CSS3 Joomla CMS HTML5 jQuery Adobe Photoshop
Google Analytics Git Bootstrap Sass SQL Regular expressions
MongoDB PHP Ajax Angular 2.x JSON Chrome DevTools
CMS Wordpress English Responsive design OOP basics SEO
Management Skills

Further information

About me

I have a great desire to grow and develop in web development.
I boast quite solid theoretical knowledge and some practical skills in such areas as:

===== Frontend =====

- * HTML5
- * CSS3 (complex selectors, animations, pseudo-classes, gradients, flexbox, media queries, cross-browser design and so on)
- * JavaScript (including ES6 and some best practices, Promises, DOM, BOM, basic OOP)
- * Typescript (learned for Angular)
- * jQuery
- * SASS
- * Bootstrap
- * basic Angular 2.x skills (I did not study 1.x version): I know components, pipes, data binding, services, some routing, dependency injection, internationalization etc.)

===== Backend =====

- * basic syntax of PHP + some OOP
- * SQL, PhpMyAdmin
- * well familiar with MongoDB basic concepts and syntax
- * beginner knowledge of Laravel, Blade templating engine
- * beginner knowledge of Node.js and Express, Handlebars templating engine

===== CMS =====

- * Wordpress (basic PHP code, create templates from scratch, editing CSS/HTML in templates, widget and menu registration, custom post types and taxonomy, child themes, WP query, basic plugins; site administration)
- * Joomla (editing of CSS/HTML in templates, basic PHP editing in templates; site administration)
- * Drupal (site administration)

===== Other technologies and skills =====

- * understand how AJAX and JSON work
- * Git (command line)
- * know the NPM eco-system, bower, babel, Gulp (concatenation, minification, browser sync, watch for file changes, image optimization, auto prefixes etc.)
- * familiar with Google Maps API
- * solid knowledge of RegEx (except for groups)
- * know and use Chrome Development Tools for debugging and site audit
- * familiar with BEM CSS concept
- * know foundations of web design, understand the principles of UX, have some skills with Photoshop and beginner-level Axure skills
- * know how to SEO a site; schema microdata; some skills in web analytics with Google Analytics.

- * use Atom editor for code and use Emmet plugin for faster HTML and CSS

- * familiar with Scrum methodology

===== Learning or plan to learn =====

- Reactive programming (RxJS)
- Laravel
- Node.js + Express
- Being a self-taught developer I understand that one thing I definitely lack is the way of thinking in a 'technical/engineering' way. So I need knowledge of algorithms, data structures and design patterns
- Testing (karma + jasmine, phpUnit)
- Webpack
- advanced usage of Git и Github
- Ionic 2 or something JS-based for developing hybrid web apps and/or PWA.

I know one should not go too broad in their learning, so this is the approximate stack of technologies I will learn in the coming years. However, I am open to other knowledge too.

My English skills allow me to communicate with clients and partners in English fluently, both orally and in writing (Advanced level). Freelance translator job has given me experience of client communication, so now I do care about what every client wants and try to cater to their needs as much as possible.

A Russian speaker, I study programming only in English (books, video and documentation). When confronted with unfamiliar tasks in development, which is a common thing, I search for solutions on English-language resources, which is easy because I have advanced googling skills.

I would really appreciate work with experienced mentors, I want and am ready to receive from them the necessary experience, to quickly master the recommended literature. I am also ready to learn to understand other developers' code.

There is a desire to further develop management skills, including related to finance, personnel and business development in general.

In everyday activities, I use time management technologies: an electronic organizer to track tasks and Evernote note system. I keep my workplace, e-mail and file system clean.

Personal qualities:

I can't live without self-education. This would not be possible without high self-organization (I did not attend any programming courses, because I know I can master everything myself together with Google). I love analyzing things around me and boast perseverance, self-discipline, enterprising mindset, management abilities. I solve problems constructively and without conflicts. I understand criticism, which stirs me to learn and practice even more. I love systems: I organize processes myself if there is no system in them and happily join the clearly established system and clearly outlined rules. I have no bad habits.

Please learn about my up-to-date skills in more detail at <http://ilya.online>.
